ENTERTAINMENT NEWSLETTER FOR THE CHUCK E. CHEESE SHOW
PLEASE SHARE WITH ALL CHUCK E. CHEESE'S CAST MEMBERS

PLAY THIS SHOW JULY 1ST THROUGH AUGUST 31ST 2014.
AFTER THAT, KEEP IT IN YOUR LIBRARY.
IT WILL BECOME YOUR BACKUP SHOW.

The heat is on at Chuck E. Cheese's this Summer! We are happy to bring you an all new show! This year's July and August Show is not Summer themed, instead it's a non-specific themed show that is full of Chuck E. Cheese original fun! After it's initial run in July and August, you may keep it in your library as a backup or play it as an alternate show.

Check this out! Included with your new show is a brand new Live Show, *Chuck E. Says 2014* and a shorter, more fun version of the *Rock Star Birthday Show*! Be sure to check out the training materials also included in this package so you can perform these two shows to the highest standards.

Thanks again to all of you out there for doing your best to make Chuck E. Cheese's a magical place. We hope you enjoy the new *Chuck E. Cheese Show*. Have a great Summer!

Revised Audio Standards

The enclosed show will have a revised volume level difference of 10 dBs between the Live/Birthday show and the regular show. Below are instructions to your Technical Managers on how to properly set and calibrate the amps for this new setting. Once the amps have been set, it is imperative that amps are not adjusted afterwards.

Step 1: Make sure you have the proper sound meter and it's set to weight c and reaction slow. This must be done in the morning when there is no ambient noise.

Step 2: For Studio C, have the control panel set at 100%. For all other shows, have the volume adjustment set to its highest level.

Step 3: With the show on the Live/Birthday Shows, adjust your amp until your sound meter reads 90 dBs.

Step 4: Confirm your regular show is at 80 dBs in the show room and game room.

Step 5: Once you have confirmed the settings, remove amp knobs if possible. If you cannot remove knobs then find a way to make it difficult to randomly adjust the knobs. If none of the above can be done, then mark where the proper volume level is on your amp.

Step 6: Unplug the sense microphone from the back of the Symetrix.

Step 7: On the next directional, go over the volume settings with the managers.

With the new settings, the loudest the show will go is 90 dBs. If you have any questions, please get in contact with your DT or RT.
